

# Port Security **Management**

## Introduction

The issue of security is a topic of great concern, piracy, armed attacks and cargo theft occur on an all too frequent basis.

Join us as we share insight into the national and international application of security regimes regarding transport security. The implementation of the International Ship and Port Facility Security (ISPS) Code is used as a starting point to address the global application of security measures of both sea-side and shore-side cargo.

The course focuses on the practical application of security measures and an understanding of the various regulations, directives, and trade requirements regarding transport security.

## Who should attend

Individuals with experience working at operational or management level in the Maritime, Port, Transport and Logistics sector.

## How will you benefit

After completion of the three (3) day short course, delegates will gain:

- an understanding of fundamental principles and the regulatory requirements for transport security
- practical application of security requirements including execution of security risk assessments, development and implementation of security plans for ships and land-based facilities
- the capability to formulate, analyse and critique existing security measures for ships and land-based facilities
- a broader understanding of the security culture

Presentation methods include PowerPoint, videos, group discussions, group work and recommended reading.

## Presenter

The short course is presented by an expert from Rotterdam (the Netherlands) with relevant industry experience.

## Requirements

Participants are required to bring a laptop with Microsoft Office installed.
