10563-748 (8) Nuclear Reactions & Nuclear Structure (1½l, 1½p)

2015

Course summary:

Nuclear reactions: scattering kinematics basic concepts. Elastic scattering, the optical model. The study of reaction mechanisms, e.g. compound nucleus formation, direct reactions, pre-equilibrium processes. Reactions with light projectiles, e.g. inelastic scattering, transfer reactions, knockout reactions. Heavy ion reactions, fragmentation. Electron scattering and high-energy nuclear reactions.

Nuclear structure: two nucleon systems (e.g. deuteron): interaction of nucleons and the inclusion of properties like charge independence and spin dependence. The Yukawa theory of meson exchange. Multiple nucleon systems: the nuclear shell model (single and multi-particle, introductory). Rotational and vibrational effects in nuclei (the collective model).

Outcomes of course:

Equips the student with a working knowledge of nuclear structure and reactions mechanisms on a post graduate level. This course forms the basis for more advanced courses in nuclear physics and is essential for any student aiming to do postgraduate research in nuclear physics.

Lecturer:

Prof P Papka
Telephone number: (021) 808-3368
E-mail address: papka@sun.ac.za
Office: Room 1015 in the Merensky Physics Building

Course content:

Formal lectures

NUCLEAR STRUCTURE AND NUCLEAR REACTIONS (approximately 24 lectures)

General properties of nuclei and interaction of nucleons
Constant nuclear density of nuclei
Binding energies
The shell model of nuclei
Shape of the nuclear potential;
General properties of nucleon-nucleon forces
Systems in which nuclear forces may be investigated
The two-nucleon system
The spin-dependent term
Properties and analysis of the deuteron:
Radial equation;
Magnetic dipole moment;
Electric quadrupole moment
Deuteron versus di-proton and di-neutron
Nucleon-nucleon scattering
The nucleon-nucleon potential
The properties and structure of the nucleons

Practical (Tutorials):

Study material:

K. Krane, Introductory Nuclear Physics, Wiley, B. Povh, K. Rith, C. Scholz, F. Zetsche, Particles and Nuclei, Springer

Learning opportunities:

Lectures as per time table

Assessment:

Methods of Assessments
Two papers of 3 hours duration each (one paper after completion of each section)
Weekly classroom exercises and homework assignments

Venue and time of assessment opportunities
See timetable

Availability of marks:
As soon as possible

Calculation of final mark for the module:
Class mark = Homework Assignments (70 %) + Classroom exercises (30 %)
Final mark = Class mark (20%) + Test 1 (40%) + Test 2 (40%)
