

## 10563 - 748 (8) Nuclear Reactions and Nuclear Structure (1.5L, 1.5P)

2020

### Course summary:

Nuclear reactions: Scattering kinematics basic concepts. Elastic scattering, the optical model. The study of reaction mechanisms, e.g. compound nucleus formation, direct reactions, pre-equilibrium processes. Reactions with light projectiles, e.g. inelastic scattering, transfer reactions, knockout reactions. Heavy ion reactions, fragmentation. Electron scattering and high-energy nuclear reactions.

Nuclear structure: Two-nucleon systems (e.g. deuteron): interaction of nucleons and the inclusion of properties like charge independence and spin dependence. The Yukawa theory of meson exchange. Multiple nucleon systems: The nuclear shell model (single and multi-particle, introductory). Rotational and vibrational effects in nuclei (the collective model).

### Module relevance in programme:

This module provides the student with the required background about the properties of the atomic nucleus and the models used to describe the structure of the nucleus, as well as the observables used to predict the outcome of nuclear induced reactions. Students are also exposed to the latest developments in the field of nuclear physics. The module requires previous knowledge such as [undergraduate quantum mechanics 254, 334](#) and builds on the introduction to nuclear physics in [on 352](#)

### Outcomes of course:

Equips the student with a working knowledge of nuclear structure and reactions mechanisms on a post graduate level. This course forms the basis for more advanced courses in nuclear physics and is essential for any student aiming to do postgraduate research in nuclear physics.

### Lecturer:

**Prof SM Wyngaardt**

Telephone number: (021) 808-3379

E-mail address: [shaunmw@sun.ac.za](mailto:shaunmw@sun.ac.za)

Office: Room 1018 in the Merensky Building

### Mentor:

The Department of Physics has appointed a staff member as mentor for each year of its physics programme to be available to students for consultation. Students should feel free to discuss general issues related to the physics programme or specific modules in the programme with the relevant mentor, in addition to usual consultations with their individual lecturers of modules.

The mentor for the Honours programme and its modules is Dr CM Steenkamp [cmsteen@sun.ac.za](mailto:cmsteen@sun.ac.za).

## **Course content:**

### **Formal lectures**

NUCLEAR STRUCTURE AND NUCLEAR REACTIONS (approximately 24 lectures)

General properties of nuclei and interaction of nucleons  
Constant nuclear density of nuclei  
Binding energies  
The shell model of nuclei  
Shape of the nuclear potential;  
General properties of nucleon-nucleon forces  
Systems in which nuclear forces may be investigated  
The two-nucleon system  
The spin-dependent term  
Properties and analysis of the deuteron:  
Radial equation;  
Magnetic dipole moment;  
Electric quadrupole moment  
Deuteron versus di-proton and di-neutron  
Nucleon-nucleon scattering  
The nucleon-nucleon potential  
The properties and structure of the nucleons

## **Practical (Tutorials):**

**Tutorials will be done on a weekly basis**

### **Study material:**

K. Krane, Introductory Nuclear Physics, Wiley, B. Povh, K. Rith, C. Scholz, F. Zetsche, Particles and Nuclei, Springer

## **Learning opportunities:**

Lectures as per time table

## **Assessment:**

### **Methods of Assessments**

Two papers of 3 hours duration each (one paper after completion of each section)  
Weekly classroom exercises and homework assignments

### **Venue and time of assessment opportunities**

See timetable

### **Availability of marks:**

As soon as possible

### **Calculation of final mark for the module:**

Class mark = Homework Assignments (70 %) + Classroom exercises (30 %)  
Final mark = Class mark (20%) + Test 1 (40%) + Test 2 (40%)
