IMIBI UVAVANYO LWENTLIZIYO Ulwazi olunokunceda Izigulane

Le ncwadana yenzelwe ukukunika ulwazi nokwenza ingqondo yakho izole malunga novavanyo okanye uxilongo oza kwensiwa lona ngoku. Siyathemba ukuba emva kokufunda le ncwadana, uyakuqonda ngcono ukuba lungantoni olu vavanyo.

LUYINTONI UVAVANYO LWENTLIZIYO OLUBIZWA NGEMIBI?

Ingakhangeleka ngathi inzima nakuba ilula! ^{99m}Technetium MIBI ilula, yinto nje esebebenzisa iradio-active ethi yakuba ingene emithanjeni iye egazini ize ingene kwiiseli ezisezihlunwini zomzimba. Njengoko intliziyoye inezihlunu/ inyama, iyangena nakuyo le technetium MIBI.

Ukungena kweMIBI kwizihlunu zentliziyoye yakho kuya kubonisa kakuhle ukuba umthambo oyikhoronari ulithumela kanjani igazi entliziyweni. Iradio-activity ingenisa imitha esuka kwitechnetium kwizihlunu/kwinyama yentliziyoye yakho, oku kungabonwa xa usebebenzisa uhlobo oluthile lekhamera ebizwa ngokuba yigamma. Oku kwenza sibone ukuba igazi eliya entliziyweni yakho lanele na okanye lincinci kunomlinganiselo ofunekayo – olu lwazi lubalulekile kugqirha wakho ukuze akwazi ukucwangcisa uvavanyo okanye unyango lwakho kwixesha elizayo.

IRADIYESHINI

Akukho mfuneko yokuba uxhalabe bubungakanani beradiyeshini oza kuyifumana. Sisebebenzisa nje amathamo amancinci eradio-activity ngoko ke akuyi kufumana iradiyeshini eninzi ngaphezu kwaleyo unokuyifumana xa usenziwa vavanyo ngeX-Reyi.

INGABA OLU VAVANYO LUQUKA NTONI?

Olu vavanyo lunamanqanaba amabini:

- a) Uvavanyo loxinzelelo (uvavanyo Iwesitresi);
- b) nolwe phasivi (ukuba kuyimfuneko)

- a) Uvavanyo Iwesitresi

Kweli nqanaba lovavanyo kufuneka konyuswe iqondo lokufunwa kwegazi yintliziyoye, eli gazi ligqitha kwizihlunu. Uxinzelelo entliziyweniS lunokwensiwa kusetyenziswa enye yezi zinto zilandelayo: ukuzilolonga kumatshini oyithredi mili, okanye usebebenzise enye yezi nto zimbini i(Persantin® okanye iDobutamine).

Phambi kovavanyo kuza kubakho uqhagamshelwano olwenziwa ngee-elektrodi phakathi kwakho nemonitha yeECG. Ezi elektrodi zincanyathiselwa esifubeni. Oku kujonga isantya ebetha ngaso intliziyoye ne-ECG xa kwensiwa uvavanyo Iwesitresi. Ufakwa idriphu emithanjeni njeneyona ndlela ilula ekunokwensiwa ngayo iMIBI.

Olu vavanyo ludla ngokwenziwa kwithredi mili. Mhlawumbi sele wakhe wayisebenzisa ithredi mili xa usenziwa uvavanyo Iwesitresi. Ukuba akunjalo, siza kunika ixesha elaneleyo lokuba ude uwuqhele lo matshini phambi kokuba siqalise ngovavanyo. Sidla ngokuqhubekeka ude ufikelele kwisantya obekelwe sona sokubetha krentliziyo yakho, oku kwenziwa kujongwe neminyaka yobudala bakho neqondo lempilo yakho. Kubalulekile ukuba uzame ukufikelela kumlinganiselo wesantya owubekelwego. Asizi kukunyanzela ngaphezu kokuba unako ukwenza, kodwa nceda usilumkise xa udinwe kangangokuba ungakwazi ukuqhubekeka nokuzilolonga okanye ukuba uva kubuhlungu esifubeni.

Ukuba awukwazi kuzilolonga (umzekelo: ngenxa yengxaki onayo emilenzeni), siya kufaka inaliti enePersantin® okanye iDobutamine emithanjeni yakho. Le naliti inala mayeza yenza kuvuleke imithanjana yegazi – le ibiza kuvulwa kukuzilolonga okanye kukwenza umthambo. IPersantin® ithatha imizuzu engaphezu kwe-4 ukuya-5, ngeli xesha iDobutamine ithatha imizuzu eli-12. Emva kwexesha lokulinda siya kufaka iMIBI size sikucele uhamba-hambe imizuwana embalwa, ukuze siqinisekise ukungena ngokwaneleyo kweMIBI entliziyweni yakho.

iMIBI ifakwa kumzuzu omnye phambi kokuyekiswa kwakho ukuzilolonga kwithredi mili okanye phambi kokufumana inaliti enePersantin® okanye iDobutamine. Ngokweenjongo zovavanyo Iwesitresi kubalulekile ukuba uquhubekkeke nokuzilolonga kangangomzuzu omnye emva kokufumana inaliti eneMIBI ukuze unyuse iqondo lokungena kwayo kwizihlunu okanye kwinyama yentliziyo. Uza klinikwa itshokolethi encinci emva kokuhlatywa ngenaliti. Ngenxa yokuba isibindi siyikhuphela kwinyongo enye iMIBI, itshokolethi iza kwenza isingxobo senyongo sicutheke okanye sishwabane kancinci ukwenzela ukuba ibe ncinci iMIBI eshiyekayo. Oku kuya kwenza ukuba sibone kakuhle ngekhamera okwenzekayo ngaphakathi entliziyweni.

Uza kulinda ke ngoku imizuzu engama-15 ukuya kwengama-30 ukuba iMIBI ijongane nokusebenza entliziyweni. Ngeli xesha ungahlamba ukuba kuyimfuneko, usenako nokutya. Igamma khamera iza kusetyenziswa ukufota yonke into eyenzekayo entliziyweni yakho.

Xa ithatha le mifanekiso, siza kucela ukuba unqengqe ebhedi elungiselelwu oku, ize iingalo uzolule zibe phezu krentloko yakho. Uya kucelwa ukuba ungashukumi tu ukwenzela ukuba ifoteke kakuhle yonke into esentliziyweni.

b) Uvavanyo Iwephasivi

Xa kusenziwa uvavanyo Iwephasivi siya kuqala sijonge isantya sokubetha krentliziyo size sikuhlabe inaliti eneMIBI. Awuzukuphinda ufumane iPersantin® okanye iDobutamine. Emva kokuhlatywa kwakho inaliti uza kulinda kangangemizuzu engama-30 ukuya-kwengama-45 ukulungiselela ukuba iMIBI ingene ngokwaneleyo entliziyweni, emva koku imifanekiso yento eyenzeka entliziyweni efana nanjengangokuya bekusenziwa uvavanyo Iwesitresi iza kufotwa kwakhona.

Iziphumo zovavanyo obelusenziwa kuwe ziya kuthunyelelwu ugqirha wakho uze wena uzifumanea kuye. Ugqirha wakho unako ukusifowunela xa efuna iziphumo zovavanyo Iwakho.

OMAKWENZIWE NEMAKUNGENZIWA

1. Nceda ungaryi kakhulu kusasa phambi kovavanyo oza kulenza, kuba ukutya kakhulu kwakwenza ukuba kube nzima xa kufuneka uzilolonge. Kucetyiswa ukuba ukutya okutyayo kwisidlo sakho sakusasa ibe sisidudu okanye isiriyeli nesiselo seziqhamo (ijusi).
2. Nceda ungaphungi iti okanye ikofu, ungaseli isiselo esinjengeCoke, ungaseli mayeza ozithengele wona anjengee(Grandpa®, Compral®, iyeza lokukhohlela) kangangeeyure ezingama-24 phambi kovavanyo/uxilongo. Ezi zinto ziya kwenza ukuba ingasebenzi kakuhle iPersantin®, loo nto yenze ukuba uvavanyo oluza kwensiwa lungazikhuphi kakuhle iziphumo njengoko kulindelekile.
3. Yiza neempahla eziza kwenza ukuba uwenze kakuhle umthambo xa uzilolonga, ungalibali ukuza netawuli yakho oza kuzosula ngayo. Izinto zokuhlamba nesepha ziyafumaneka apha, ungazihluphi ngokuza nezakho.
4. Ukulungiselela uvavanyo Iwesitresi neDobutamine kwakufuneka uyeke ukusela amayeza akho esiqhelo kangangeentsuku ezintathu phambi kokwenza uvavanyo, umzekelo: amayeza okuthomalalisa anjenge(Inderal®, Tenormin®, Cave-dilol®, njalo njaloetc.). Ukuba akuqinisekanga okanye uyathandabuza, nceda usifowunele kwanethuba okanye ubonane nogqirha wakho.
5. Asinakuthanda ukuba wenze imithambo okanye uzilolonge xa unomkhuhlante okanye ubunawo kwiiveki ezintathu phambi kokuba uze kuvavanyo. Oku kukwanjalo nakwisiphi na isigulo esesulelyayo. Ukuba ukule meko nceda usazise kwanethuba ukuze sikwazi ukuhlelisa umhla wakho wokubonanan nathi.
6. Ixabiso leMIBI liphezulu kakhulu kwaye I-odelwa wena wedwa, kubalulekile ke ngoko ukuba ugcine umhla obekelwe bucala wokubonana nathi. Ukuba uneengxaki ngoku okanye unemibuzzo onayo nceda unxibelelane nathi kwanethuba.
7. Idinga lakho lenzelwe umhla nexesha elithile. Fika kwanethuba. Ukuba ufile emva kwexesha uza kwenza lulibaziseke uvavanyo Iwazo zonke izigulane ezimelwe kukuvavanywa emva kwakho ngalemini.

SIFUMANE

Ukuba unemibuzzo nceda ubuze ngaphandle kokuthandabuza.
